

Comprehensive Service

Superior Tank Solutions Inc., is a full service firm dedicated to providing premier, comprehensive design, manufacturing, installation and service to the storage tank industry. After inspecting thousands of tanks over 30 years, we know which products and techniques work the best over the long term. STS provides a complete range of services from the design, manufacturing and installation of new steel tanks to comprehensive service and long term maintenance of existing tanks. Utilizing cutting edge coatings technologies and high end machinery, our dedicated team of tank specialists will handle all of your steel tank needs with uncompromising quality and service. We specialize in three main areas:

Tank Cleaning, Conditional Assessments and Renovations

With routine cleanings, assessments and renovations you can rest assured your tanks will operate at peak performance and any potential issues will be discovered early eliminating emergency downtime and expensive repairs. In addition, a clean tank will lower your operating costs as disinfectant usage will decrease and produce less DBP facilitating compliance with EPA Stage 2. During a tank cleaning and assessment we will:

- Remove sediment and invisible biofilm buildup then disinfect interior.
- Complete conditional assessment including inaccessible areas such as underside of tank bottom.
- Perform structural integrity analysis to avoid premature failure
- Evaluate safety issues and provide upgrades to eliminate injury or citation
- Review new standards and regulations to ensure compliance

The exterior appearance of a water storage tank is the main representation of the local water infrastructure and a tank renovation can boost residents' confidence in the entire system. STS can also provide comprehensive tank renovations:

- Security enhancements to prevent vandalism or theft and resulting damage
- Corrosion repair to prevent significant future problems
- Interior/Exterior coating renovations (Various new 100% solids coatings available)

Exclusive Asset Management Program

"Many thousands of dollars can be saved and complaints from citizens can be eliminated if a planned approach to tank maintenance is taken." AWWA M42 (1998): Chapter 9.

Our tank experts will help you save time and money through our unique ability to service all your tank needs. With our exclusive Annual Maintenance Program (AMP) your budget will be simple and straightforward.

We have the long term vision to make recommendations and will customize a program to your system's specific requirements. All preventative tank maintenance will be covered under one asset management solution with a guaranteed annual fee and we take all the risk. No more questionable third party inspections or costly change orders and risk associated with the traditional low bid process.

Turn-Key New Bolted and Welded Steel Tanks

When your system requires additional storage capacity, STS has a direct connection to Superior Tank Co., Inc., which manufactures bolted steel and welded steel tanks. We can engineer, supply and install new tanks at the manufacturer direct price. This connection eliminates middleman mark up and ensures exceptional customer service.

We will be glad to answer your tank questions!
